

## Maintenance and Cleaning

Under normal operating conditions these tap do not require anything other than occasional routine maintenance. For instance, if the flow pattern from the spout becomes irregular this is most likely caused by some impurity having become lodged behind the antispash. Should this happen the antispash can be unscrewed and the obstruction removed. Likewise if the tap starts to drip, attention may be required to the valves which can be replaced as necessary.

**Care of Finish.** Our taps have been most carefully manufactured and their surfaces will maintain their appearance for a long time provided they are only cleaned with a soft cloth, soap and water. Under no circumstances should any abrasive liquid, powder or scouring pad be used.

You should also retain your dated invoices as proof of purchase to validate any claims under our guarantee.

## Guarantee and Liability. 2 Years

Your eLIO tap has been manufactured to the high standard you would expect of any Carron Phoenix product. But in the unlikely event that you should experience any defect in the materials or workmanship within two years of purchase, we will replace the faulty part free of charge. This is provided the tap has only been used for normal domestic purposes in the UK and that the installation and maintenance instructions have been observed.

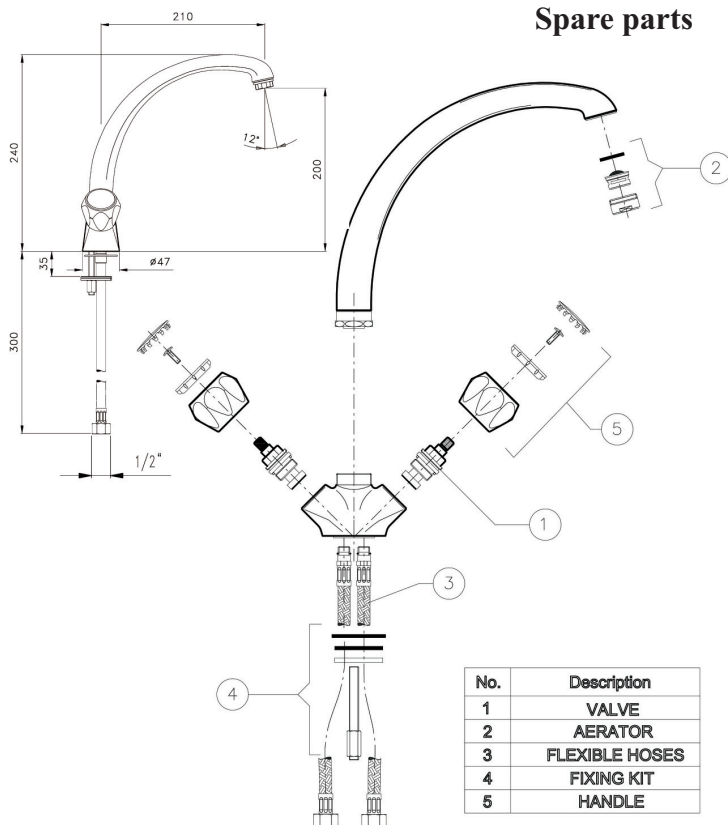

The surface finish is guaranteed for two years from the date of purchase provided our advice concerning care has been observed and no scouring agents have been used. Scuffs and scratches caused by normal wear and tear, improper installation or accidental damage are excluded from the guarantee.

**Please ensure that this kitchen tap is installed in accordance with local water bye laws**

### Before you Start...

Read this leaflet carefully before proceeding. If your remain in doubt regarding your competence to install this product, we recommend you employ the services of a registered plumber.

### Installation Instructions

**Attention.** Before installing the new tap it is essential that the supply pipes are thoroughly flushed through in order to remove any swarf, debris or other impurities that may damage moving parts within the tap or obstruct the flow of water through the spout.

**Installation.** First place the tap in position on the sink to see if any alteration to the existing pipework is necessary.

After making any necessary alteration, fix the tap with the appropriate fixing kit (No. 4). Then the flexible hoses (1/2") have to be connected to the hot and cold water supply.
