

Cleaning and Care Instructions

Glass Frame and Stainless Bowls Inset Sink

Day to day cleaning of your Glass Frame and Stainless steel Bowls sink:

Care must be taken when cleaning your sink or indeed in its everyday use. The manufacturer suggests you follow these simple guidelines.

It is good practice to clean your sink immediately after use. Most deposits can be removed with washing up liquid and hot water, followed by a clean water rinse and by drying with a soft cloth to prevent lime-scale build up.

For more stubborn deposits use a non-abrasive cream cleaner without bleach. This should be applied with a soft damp cloth, again followed by a clean water rinse and dry.

The glass frame may be cleaned with a glass cleaner to keep this material in the best condition.

As with any glass material care must be taken when using and cleaning this material as heavy sharp objects will scratch the surface.

Never use a wire wool pad such as Brillo® to clean your sink. It will create tiny scratches and will also shed small pieces of mild steel that will later rust and give the appearance that your sink is rusting. This is not the case and once adhered to your sink. These small particles that can be removed with a car paint restorer such as T-Cut®.

The quality of your water can affect the good looks of your sink by giving the appearance of staining. This 'staining' is generally a build up of limescale or similar mineral deposit, particularly prevalent in hard water areas. Limescale readily absorbs staining agents such as tea, coffee, red wine etc.. spoiling the appearance of your sink. For this reason always rinse and dry your sink after each use to avoid mineral deposits being left behind on the surface when the water evaporates.

To remove any limescale that has built up on your sink try using products such as Viakal® or Limelite®. Alternatively, soak in a solution of one part vinegar to three part water. This will loosen the limescale making it possible to then scrub it away with a Scotbrite® pad in the bowl only and cloth on the glass frame and kitchen sink cleaner.

Take care to avoid

Any bleach or other cleaning agents containing bleach should not be left in contact with your sink as discolouration or pitting of the surface could occur.
